

Please reject the NAB's petition 04-160. I rely on XM traffic and weather to improve my 25 mile each way commute to Washington DC. Since I have been using it I have been able to respond much quicker if at all to developing situations. I also use it to check traffic in other cities as I travel north to NY. This would be impossible without satellite radio. If this is such a big deal why hasn't it been done by ground radio? This is a service that benefits all, even those w/o satellite radio as it moves traffic quicker to alternate routes. Please do not cave in to the NAB.
